BOTOX COSMETIC INJECTIONS

BOTOX Cosmetic is used for improvement of facial expression lines in the glabella, forehead and crow's feet. A small amount of BOTOX Cosmetic is injected in the overactive muscles that create wrinkles. They relax and the lines fade with results in 5-7 days. Results may last 3 to 6 months depending on injection site.

COSMETIC FILLER SUBSTANCES

Filler substances are used for fine lines, wrinkles, lip augmentation, laugh lines, scars, marionette lines, jowl lines, and facial volume loss. Fillers are injected directly into the dermal layers of the skin causing a reduction of lines, wrinkles and scars. Results on average last 6 to 12 months for hyaluronic acid injections.

Juvederm Ultra XC (for fine lines)

Juvederm Ultra Plus XC (for deeper lines)

SCLEROTHERAPY

Sclerotherapy is a treatment for the removal of superficial spider veins on the legs. It involves small amounts of a special solution injected directly into unwanted veins with a very fine needle. After the treatment, surface veins fade over a period of 6 to 8 weeks.

CHEMICAL PEELS

The **Illumize peel** is a very superficial peel. This peel improves acne, hyperpigmentation, and skin texture, clarity and color. **Optimal results require a series of treatments**

The **Vitalize peel** includes a unique blend of peeling agents: alpha-hydroxy acids, beta-hydroxy acids, resorcinol and retinoic acid. It improves acne, hyperpigmentation, skin texture and tone, and age spots and freckles

The **Rejuvenize Peel** is our most aggressive peel. After one Rejuvenize peel, you should notice a significant improvement in hyperpigmentation, acne and improvement in skin texture and tone.

LATISSE

Want longer, fuller, darker lashes? Grow them. Latisse is the first and only FDA-approved prescription treatment used to promote eyelash growth by prolonging the anagen phase (active growth phase). Latisse solution is a simple once-a-day application. A majority of users see a significant improvement by 2 months.

A consultation is needed to determine candidacy and for prescribing information.

V-BEAM PULSED DYE LASER

The V-beam laser is valuable for the treatment of redness of the face and neck, rosacea, facial veins and telangiectasias, scars, and the improvement of sun damaged skin. This laser uses advanced technology to help reduce patient downtime by preventing purpura or bruising.

LASER HAIR REMOVAL

The GentleLase (for lighter skin) and the GentleYag (for darker skin) lasers provide permanent hair reduction. Common treatment areas include the chin, armpits, bikini area, upper lip, and arms. The lasers feature dynamic cooling to maximize safety and comfort.

Prices vary based on treatment location. Please call our office at (704) 341-0090 for more information.
